Introduction

Purpose

The scope of this document is to describe the solution for the Voice Assistant service.

Audience

This document is intended for all members who are involved in the implementation of the Voice Assistant service (Marketing, CORE/Transmission, Network, IT/Infrastructure team, Revenue Assurance etc.)

Product Overview

Today AI/ChatGPT is transforming lives, but about 43% of your customers are left behind. The poor, non-smartphone users and the elderly population, who lack internet access, or technical expertise.

EVA (AI on Call) changes that! This revolutionary AI service empowers everyone with just a phone call. Imagine farmers receiving crucial crop advice, students getting homework help, and communities accessing essential healthcare information – all through over a simple call, available in a staggering 57 languages!

Developed in collaboration with leading tech giants Microsoft and Google, EVA brings the power of AI to everyone, regardless of background or technical ability.

Why EVA is a game-changer:

- **Phone-based access:** No smartphone or internet connection needed, ensuring universal accessibility.
- **Multilingual support:** Breaks down language barriers with fluency in 57 languages.
- **Powered by cutting-edge AI:** Leverages the capabilities of ChatGPT and Google Gemini for exceptional performance.

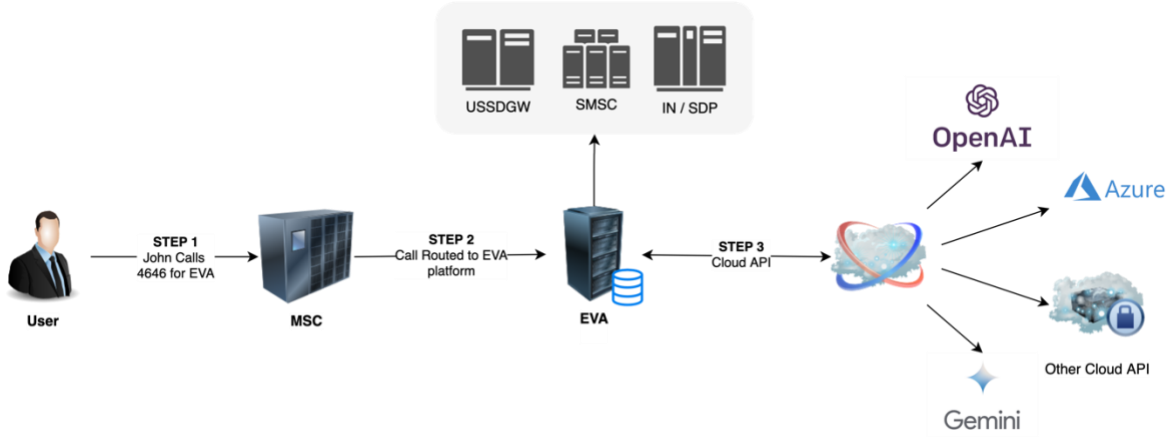
User Journey



Step 1: User Initiation: A user, initiates the process by dialling a short code to access the EVA service.

Step 2: Connection to Telecom Infrastructure: The call is routed through the telecom network's Mobile Switching Canter (MSC), which is responsible for connecting calls to their intended destinations.

Step 3: EVA Platform Engagement: The call is then routed to the EVA platform, which serves the interface the call with AI technology. EVA platform validates the user subscription in the database. EVA interacts with cloud-based APIs, including Open AI, Google's Gemini service. The results from the AI processing, which are voice responses or information, are delivered back to the user through the EVA platform, completing the interaction cycle.

Integration Points

COMPONENTS	INTERFACE	DESCRIPTION
OCS / IN	Diameter, UCIP, PAMI, XML, HTTP, OCS, CS3, SOAP	To deduct the money from subscriber account.
MSC	SIP	For Call routing to the EVA platform
SMSC	SMPP v 3.4	To send and receive Flash SMS to end user.
USSD GW	SMPP v3.4 / HTTP	For service subscription
Access from Web	HTTP	Request from Web shall be routed to the Voice Assistant platform
OBD Short Code and Header Enrichment		For Promoting service subscription
Internet access on the application server		To access the Large Language Models (LLM) and transliteration libraries.
VPN Connectivity	Site to Site	Site to Site VPN Connectivity to access the servers remotely.

VM Requirements

Number of Servers	Server Specifications for each server
2	16 VCPU, 32 GB RAM, 1 TB Disk

Note: The VM expansion will be done once there is increase in the traffic.
